Definitions You Need To Know

Non-Detects (ND) – Laboratory analysis indicates that the constituent is not present

Parts per million (ppm) or Milligrams per liter (mg/l) – One part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) or Nanograms per liter - One part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Parts per quadrillion (ppq) or Picograms per liter – One part per quadrillion corresponds to one minute in 2,000,000,000,000 years, or a single penny in \$10,000,000,000,000.

Picocuries per liter (*pCi/l*) – Picocuries per liter is a measure of the radioactivity in water.

Millirems per year (mrem/yr) – Million fibers per liter is a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) – Nephelometric turbidity unit is a measure of the clarity of the water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Variances & Exemptions (V&E) – State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Action Level – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) – A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) – The "Maximum Allowed" is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) – The "Goal" is the level of contaminant in drinking water below which there is no known or excepted risk of health. MCLGs allow for margin of safety.

OUR DAILY WATER

2011 Annual Water Quality Report

(For Period January through December 2010)

		TABLE	OF DETECTE	D DRIN	IKING	TABLE OF DETECTED DRINKING WATER CONTAMINANTS
Contaminants	Violation (Yes/No)	Level Detected	Unit of Measurement	MCLG	MCL	Likely Source of Contamination
Total Coliform Bacteria	°2	1 Sample June 2010 1 Sample Nov 2010*	Coliform present or coliform absent	٥	Presence in 5% of monthly samples	Naturally present in the environment
Copper	No	o.102** (o > AL)	mdd	1.3	AL = 1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Nitrate (as Nitrogen)	No	0.34 - 1.05	mdd	01	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Trichloroethylene	No	ND - 2.59	qdd	0	5	Discharge from metal degreasing sites and other factories
			S	Secondary Contaminants	Contan	inants
Chloride	No	2.43 - 4.49	mdd	N/A	250	Naturally occurring in the environment or as a result of industrial discharge or agricultural runoff
Hardness	No	91.4 - 146	mdd	N/A	1	Naturally occurring in the environment or as a result of treatment with water additives
рН	No	7.83 - 8.64	S.U.	N/A	N/A	Naturally occurring in the environment or as a result of treatment with water additives
Sodium	No	1.15 - 4.92	mdd	N/A	N/A	Naturally occurring in the environment
Sulfate	No	1.86 - 6.48	mdd	N/A	250	Naturally occurring in the environment or as a result of industrial discharge or agricultural runoff
Total Dissolved Solids	No	144 - 172	mdd	N/A	500	Naturally occurring in the environment or as a result of industrial discharge or agricultural runoff

All Follow-up samples were negative for coliform bacteria

2011 Annual Water Quality Report For the period January through December 2010

Oxford Water Works & Sewer Board

Oxford Water Works & Sewer Board is pleased to present to you this year's 2011 Annual Water Quality Report. This report is designed to inform you about the quality water and service we deliver to you on a daily basis, and our constant goal being to provide you with a safe and dependable supply of drinking water.

BANK DRAFT IS AVAILABLE FROM OXFORD WATER!

Saves you: Time – Postage – Checks

Contact our office at 831-5618 for more information.

THE OXFORD WATER & SEWER SYSTEM INCLUDES:

Water Mains in Service313 miles
Sewer Mains in Service122 miles
Water Storage Tanks5
Water Storage Capacity5.4 Million Gallons
Water Production Capacity9.0 Million Gallons Per Day
Booster Pumping Stations7
Public Fire Hydrants938
Sewer Treatment Capacity6.4 Million Gallons Per Day
Sewer Pumping Stations29
Metered Connections9675

WHERE DOES OUR WATER COME FROM?

Oxford's Water Supply is classified as Groundwater. Groundwater classification means the water is pumped from below the surface of the ground.

Drinking water is supplied to customers of Oxford Water by five production wells that draw water from The Knox Group, Shady Dolomite Aquifer. Each well is approximately 300 feet deep and the water from each well meets all regulations without any treatment required; however, we do add some chlorine to protect the water in tanks and distribution lines.

Oxford Water Works & Sewer Board is a member of American Water Works Association (AWWA), Alabama Rural Water Association (ARWA), the National Rural Water Association (NRWA), Alabama's Water Environment Association (AWEA), and the Groundwater Foundation.

The Oxford Water Works routinely monitors for constituents in your drinking water. We had tests performed for over 90 constituents and only 10 were at detectable levels. All monitoring and testing were performed according to Federal and State Laws. This table shows the results of our

monitoring for the period of January 1, 2010 to December 31, 2010 for Microbiological, Radioactive, Inorganic, Lead/Copper, Nitrates, Synthetic Organics (including pesticides and herbicides), Disinfection By-Products, and Volatile Organic Contaminants. All of these were performed in accordance with the regulatory schedule.

As you can see by the table, our system had no violations. We were proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water IS SAFE at these levels. MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Thank you for allowing us to continue providing your family with clean quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers. These improvements are sometimes reflected as rate structure adjustments. Thank you for your understanding. Please call our office if you have any questions.

Safe Drinking Water Act

What does this mean for you?

The Safe Drinking Water Act (SDWA) was signed into law on December 16, 1974. The purpose of the law is to assure that the nation's water supply systems serving the public meet the minimum national standards for the protection of public health.

The SDWA covers all public water systems with piped water for human consumption with at least 15 service connections or a system that regularly serves at least 25 individuals. The SDWA directed the U.S. Environmental Protection Agency (EPA) to establish national drinking water standards. These standards limit the amount of certain contaminants provided by public water. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water. All drinking water, including bottled water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at 1-800-426-4791. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infection. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activities.

Oxford Water Works and Sewer Board is proud to report that we met or exceeded all Federal and State Standards for drinking water during the reporting period.

Lead and Copper Compliance

The most recent testing for lead and copper compliance within the distribution system was in 2010. This testing was done in accordance with applicable regulations. No lead or copper samples exceeded the action level. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Oxford Water Works and Sewer Board is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods and other steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http:www/epa.gov/safewater/lead.

Monitoring Schedule

Constituent Monitored	Date Monitored
Inorganic Contaminants	2010
Lead/Copper	2010
Microbiological Contaminants	Current
Nitrates	2010
Radioactive Contaminants	2007
Synthetic Organic Contaminants (incl. pesticides & herbicides)	2009
Volatile Organic Contaminants	2010
Disinfection By-Products	2010

Sacteriorogical			0-Dicilioropenzene		1.7-
